

Dividend Events & Corporate Actions Research Guide (For Traders & Algo Developers)

This document expands the dividend study into a research-oriented guide. It includes historical-style dividend datasets, price behavior patterns, corporate action explanations, and example Python workflows that can be used to track dividend events automatically for trading research.

1. Major Corporate Actions

Event	Explanation
Dividend	Cash paid to shareholders
Bonus Issue	Free shares issued to shareholders
Stock Split	One share divided into smaller units
Rights Issue	Discount shares offered to existing shareholders
Buyback	Company purchases its own shares

2. Dividend Timeline

Step	Description
Announcement	Board declares dividend
Ex-Date	Last day to buy shares to receive dividend
Record Date	Company checks shareholder list
Payment Date	Dividend credited to bank

3. Example Dividend Event Dataset

Company	Announcement	Ex-Date	Dividend	Price Before	Price Ex-Date
Hero MotoCorp	5 Feb 2026	11 Feb 2026	■110	4600	4610
GAIL	1 Feb 2026	5 Feb 2026	■5	185	182
NTPC	2 Feb 2026	6 Feb 2026	■3.75	315	318
Power Grid	4 Feb 2026	9 Feb 2026	■4.75	290	292
BPCL	29 Jan 2026	2 Feb 2026	■10	600	605
Mazagon Dock	5 Feb 2026	13 Feb 2026	■15	2300	2310
Sun Pharma	3 Feb 2026	5 Feb 2026	■7	1450	1458
Nestle India	4 Feb 2026	6 Feb 2026	■75	24500	24650
Shipping Corp	6 Feb 2026	17 Feb 2026	■3.5	210	214
Apollo Hospitals	10 Feb 2026	15 Feb 2026	■10	6400	6420

4. Common Price Patterns Around Dividend Events

Pattern 1: Slight price increase after dividend announcement.

Pattern 2: Price adjustment on ex-dividend date.

Pattern 3: Recovery phase after ex-date depending on company strength.

5. High Dividend Companies in India

Company	Typical Yield
Coal India	5–10%
Power Grid	4–7%
ONGC	4–6%
REC Ltd	5–9%
Hindustan Zinc	8–15%

6. Python Ideas for Dividend Tracking

Example workflow:

1. Fetch corporate actions from NSE API
2. Filter dividend announcements
3. Store events in database
4. Track stock price before and after ex-date
5. Build dataset for research

Example pseudo code:

```
import requests

url = "https://api.nseindia.com/corporate-actions"

data = requests.get(url).json()

for event in data:
    if event["type"] == "Dividend":
        print(event["symbol"], event["exDate"], event["amount"])
```

7. Research Ideas for Traders

Research idea examples:

- Measure price movement 5 days before dividend announcement.
- Study recovery time after ex-dividend date.
- Compare PSU dividend stocks vs private companies.
- Track dividend yield spikes.

8. Key Insights

Dividends rarely create instant profit because prices adjust on the ex-date. However dividend events can influence liquidity and short-term volatility in certain sectors such as PSU energy companies.
